

NTK | THC Test Kit

The SwabTek THC Test Kit is a single-use spot-test designed for use in screening for Δ^9 -Tetrahydrocannabinol (THC) in any sample, or on any surface, in a quantity that exceeds the federally restricted limit of 0.3% by concentration. The test is designed for use on any surface or material suspected of containing THC, including plant material, vape pens, vape oil, e-cigarettes, creams, gels, and edibles. The test is capable of screening for traces of THC in quantities as little as 50 μg in mass.

SwabTek's unique form-factor helps to ensure proper sample collection and reduces the user's risk of exposure during testing.
